

# THE BETTER BENCH

- **Strong**
- **Durable**
- **Portable**
- **Affordable**

Metal legs and framing!

VAL-CO's Better Bench System has been designed for strength, durability and value. The Better Bench can be permanently installed or can be used as a freestanding bench. With an easy bolt together design, the Better Bench can be assembled in

less time than conventional bench systems. Designed for maximum loading, the Better Bench can support over 40 lbs per sq.ft. With removable tops, cleaning is easy and quick as is relocation of the bench to another area, a great feature for Garden Centers where portability is a must. With it's unique angled legs, watering hoses glide around the corners preventing kinks and cuts. The black bench top prevents light reflection back to the plant and the ventilation slots allow for maximum air circulation and water drainage around the plants.

The VAL-CO Boys

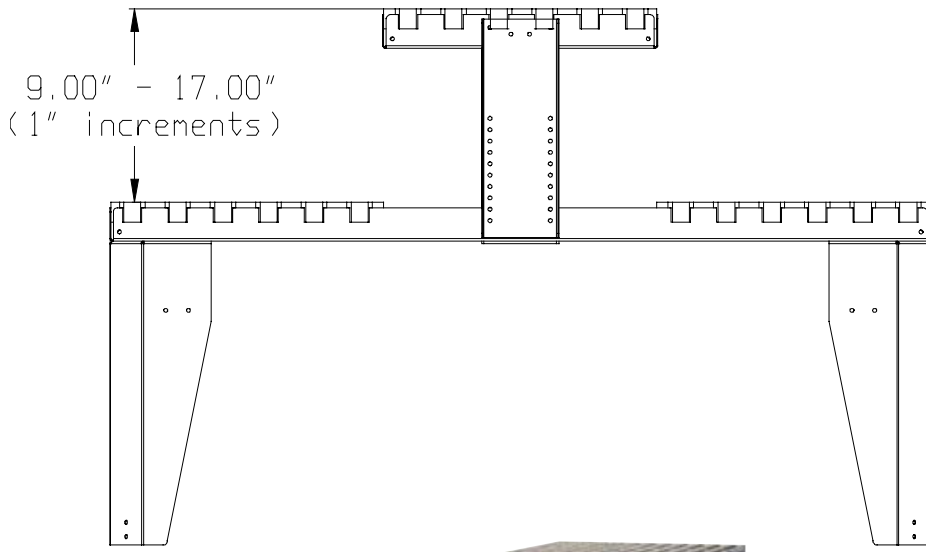

## Specifications

- Bench Widths: 24", 36", 48", 72" & 96"  
Heights: 24", 30" & 40"  
Lengths: Bolt together design allows for any length bench.
- 12 gauge galvanized legs and framing.
- No cross bracing required.  
(in most cases)
- Exceptional warranty.

A few of the other quality products we offer:

As manufacturer of the Better Bench System, our goal was to make a greenhouse / garden center bench which very durable, had a high weight to sq. ft. ratio, was easy to assemble, portable and one which was attractive to its surroundings. The Better Bench meets these goals and is cost effective.

Our bench is available in three heights (24", 30" & 40") and five widths (24"\*, 36"\*, 48", 72" & 96"). The Better Bench System is configured in 6 ft increments, so any length bench can be ordered. Since our bench is free standing, there is no need to place the legs in cement. The bench framing is manufactured from 12 gauge-galvanized steel; a material long used by VAL-CO in feed silos for livestock applications. The framing bolts together very quickly and easily. The bench tops are molded in black plastic and have been engineered for superior strength and durability. The tops are engineered to stand up to high loading. In VAL-CO's AG Division, the tops are configured for flooring in swine production, so strength and durability and the ability to remove the floor for cleaning, were required. In the Better Bench System, the black tops easily lock over the support rails forming a continuous and smooth top in any length bench. The tops are engineered not to hold or pool water and allow for maximum air circulation.

Available as an option on the 6' wide tops is our adjustable, tiered bracket assembly, which allows the center top panels to be elevated above the rest for multi level displaying of product.

\* - Cross bracing may be required for lengths over 6 feet.
